AlgoViz — DSA Visualizer

CS543 Web Services Assignment 5
HTTP Methods & Headers — Implementation Guide

Purpose: This guide converts the Assignment 5 requirements into a concrete checklist for the AlgoViz project. It is based on the assignment text provided and the AlgoViz project presentation.

Existing AlgoViz stack: React.js frontend, Java 21 + Spring Boot backend, MySQL + Spring Data JPA/Hibernate, Spring Security/JWT, Maven, Postman and GitHub.

Important: *This is an implementation plan. Exact existing endpoint names and source-file structure must be checked against the project source before editing.*
