4. Part B — Headers on Every Message

Requirement	What to implement
Content-Type	JSON bodies use application/json.
Accept	Return JSON when accepted; unsupported requested type → 406 Not Acceptable.
Content-Encoding	Enable gzip for large JSON if supported.
Create	201 Created + Location: /api/executions/{id}.
Read	200 OK.
Delete	204 No Content.
Errors	400 malformed; 404 missing; 409 conflict; 422 domain refusal.
Authorization	Protected endpoint requires Authorization: Bearer <token>; missing/empty → 401.
Cache	Single-item GET: Cache-Control + ETag.
Rate limit	X-RateLimit-Limit + X-RateLimit-Remaining; exceeded → 429 + Retry-After.
CORS	Access-Control-Allow-Origin + OPTIONS preflight.
Security	X-Content-Type-Options: nosniff + Strict-Transport-Security.
Framework	Record Date and Server if framework sends them.
