6. Part D — Verification & Documentation

D1 — curl -v transcript

Capture these seven cases:

- Create → 201 + Location.
- Repeat same create with same Idempotency-Key → original result/no duplicate.
- Conditional GET with matching If-None-Match → 304.
- Conditional write with stale If-Match → 412.
- Malformed request → 400.
- Missing resource → 404.
- Protected endpoint without Authorization → 401.

D2 — Headers table

Endpoint	Request headers	Response headers
GET /api/algorithms	Accept	Content-Type; cache headers if applicable
GET /api/algorithms/{id}	Accept; Authorization if protected	Content-Type; Cache-Control; ETag
POST .../execute	Content-Type; Accept; Authorization; Idempotency-Key	Content-Type; Location; rate-limit headers
PUT/PATCH /api/executions/{id}	Content-Type; Accept; Authorization; If-Match	Content-Type; ETag; rate-limit headers
DELETE /api/executions/{id}	Authorization	rate-limit headers
OPTIONS /api/algorithms/{id}	Origin / Access-Control-Request-*	Allow; Access-Control-Allow-Origin/Methods/Headers
